

LISTING OF CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

Claims 1-44 (Cancelled).

45. (New) A bracket for mounting a pump to a rail of a comestible fluid container rack, the rail including at least one groove, the pump including a first protrusion, a first aperture, and a second protrusion, the bracket comprising:

a substantially planar body including at least one edge that slides along the at least one groove of the rail;

at least one of a lever, at least one finger, and at least one boss coupled to the substantially planar body;

the lever including a second aperture to receive the first protrusion of the pump;

the at least one finger received by the first aperture of the pump; and

the at least one boss receiving the second protrusion of the pump.

46. (New) The bracket of claim 45, wherein the at least one edge of the substantially planar body is beveled.

47. (New) The bracket of claim 45, wherein the lever snaps onto a pin of the pump, and wherein the lever is pressed to release the pin of the pump.

48. (New) The bracket of claim 45, wherein the lever is integral with the substantially planar body.

49. (New) The bracket of claim 45, wherein the at least one finger includes two fingers integrally coupled to one edge of the substantially planar body.

50. (New) The bracket of claim 49, wherein each one of the two fingers includes a first portion perpendicular to the substantially planar body and a second portion parallel to the substantially planar body.

51. (New) The bracket of claim 45, wherein the at least one boss includes two bosses raised from the substantially planar body, the two bosses spaced to frictionally secure the second protrusion of the pump, the second protrusion including a rail on a side of the pump.

52. (New) A method of mounting a pump to a rail of a comestible fluid container rack, the method comprising:

- sliding a bracket between grooves of the rail;
- pivoting a first end of the pump toward the bracket;
- engaging an aperture of the pump with at least one finger of the bracket;
- pivoting a second end of the pump toward the bracket;
- engaging a first protrusion of the pump with at least one boss of the bracket; and
- engaging a second protrusion of the pump with a lever of the bracket.

53. (New) The method of claim 52 and further comprising snapping the lever onto a pin of the pump to secure the pump to the bracket.

54. (New) The method of claim 53 and further comprising pressing the lever to release the pin of the pump and removing the pump from the bracket.

55. (New) A comestible fluid container rack to support a comestible fluid container and a pump, the pump including a first protrusion, a first aperture, and a second protrusion, the rack comprising:

a plurality of vertical supports;

a stretcher extending between two of the plurality of vertical supports;

a rail extending between two of the plurality of vertical supports, the rail including at least one groove; and

a bracket including a substantially planar body including at least one edge that slides along the at least one groove of the rail, the bracket including at least one of a lever, at least one finger, and at least one boss coupled to the substantially planar body;

the lever including a second aperture to receive the first protrusion of the pump;

the at least one finger being received by the first aperture of the pump; and

the at least one boss receiving the second protrusion of the pump.

56. (New) The rack of claim 55, wherein the at least one edge of the substantially planar body is beveled.

57. (New) The rack of claim 55, wherein the lever snaps onto a pin of the pump, and wherein the lever is pressed to release the pin of the pump.

58. (New) The rack of claim 55, wherein the lever is integral with the substantially planar body.

59. (New) The rack of claim 55, wherein the at least one finger includes two fingers integrally coupled to one edge of the substantially planar body.

60. (New) The rack of claim 59, wherein each one of the two fingers includes a first portion perpendicular to the substantially planar body and a second portion parallel to the substantially planar body.

61. (New) The rack of claim 55, wherein the at least one boss includes two bosses raised from the substantially planar body, the two bosses spaced to frictionally secure the second protrusion of the pump, the second protrusion including a rail on a side of the pump.
